LINEA™

Made-To-Measure Solutions

EMBRACE THE CRAFTMANSHIP OF A

CUSTOM-MADE EUROPEAN LIFT

ADDING STYLE AND COMFORT TO YOUR HOME.

250-500 KG rated load	**12 meters** travel height	**5-6 persons** capacity	**6 Stops** landings

MAKE YOUR HOME MORE ACCESSIBLE

Installing a home elevator offers countless advantages, particularly for people with mobility constraints.

It provides them with the autonomy they require to navigate their residences without having to depend on others for help and support.

Beyond providing an easier way to traverse up and down levels, home elevators are also aesthetically pleasing and can add value to a property. They can be customized with various finishes, colours, and materials in order to fit any decor scheme.

Overall, having a home elevator is an excellent way to make life easier while still adding style and improving the overall value of the home.

TOP 4 REASONS WHY CLIENTS CHOOSE LINEA

1

Wide range of cabin finishes & colours

The Linea home lift range offers a clean and modern selection of finishes, cabin options, materials and accessories to give your home an unmissable touch.

Each lift is designed to reflect your preferences with most elements able to be adjusted to suit your decor.

2

Made-to-measure projects

A versatile home lift which can be adapted to every property: narrow shafts, dedicated areas indoor or outdoor. Linea Lift is a discreet solution to assist the movement within the house.

The cabin dimension vary from a minimum of **800 x 800mm** and a maximum of **1100 x 1400mm**. Linea is able to be fitted into a builder supplied shaft or alternatively with a shaft by Direct lifts with glass or ready to be enclosed by others.

3

Safety and comfort

The Linea lift is fully registered model with Safework / Workcover giving you peace of mind with safety compliance. Each Linea includes a multitude of safety features as required by European and Australian standards. A smart fault log is included as standard feature to monitor the lifts performance so you can be assured of reliable operation long into the future. Battery backup is another standard inclusion which will automatically start if by chance there is a power outage while the lift is in use.

4

Energy efficiency

Linea is a lift designed with low energy and respect for the environment in mind. Compared to other models, it saves money on your power bill and reduces impact on our ecosystem.

- **Class "A"** energy rating according to the German Directive VDI 4707, for energy efficiency in the building industry.
- **95% manufactured** with recyclable materials.
- The Linea Lift with Gearless traction model requires only 0.75 kW, the **same as a small toaster!**
- **Eco friendly home lift:** the C02 emissions are reduced by 90%
- The Hydraulic Drive allows for exceptional **dimensional flexibility.**
- **Thermally insulated doors are** available for those in cold or hot climates.

STYLISH & ELEGANT SOLUTIONS

TAILOR-MADE LIFTS

Each Linea Lift is tailor-made to suit your specific dimensions and preferences from a wide range of finishes/features.

Simplifying Accessibility

Transform any home or commercial premises into a place that all people can easily traverse. With limited builder's works required, Linea lifts are quick and easy to install, usually within 1-2 weeks.

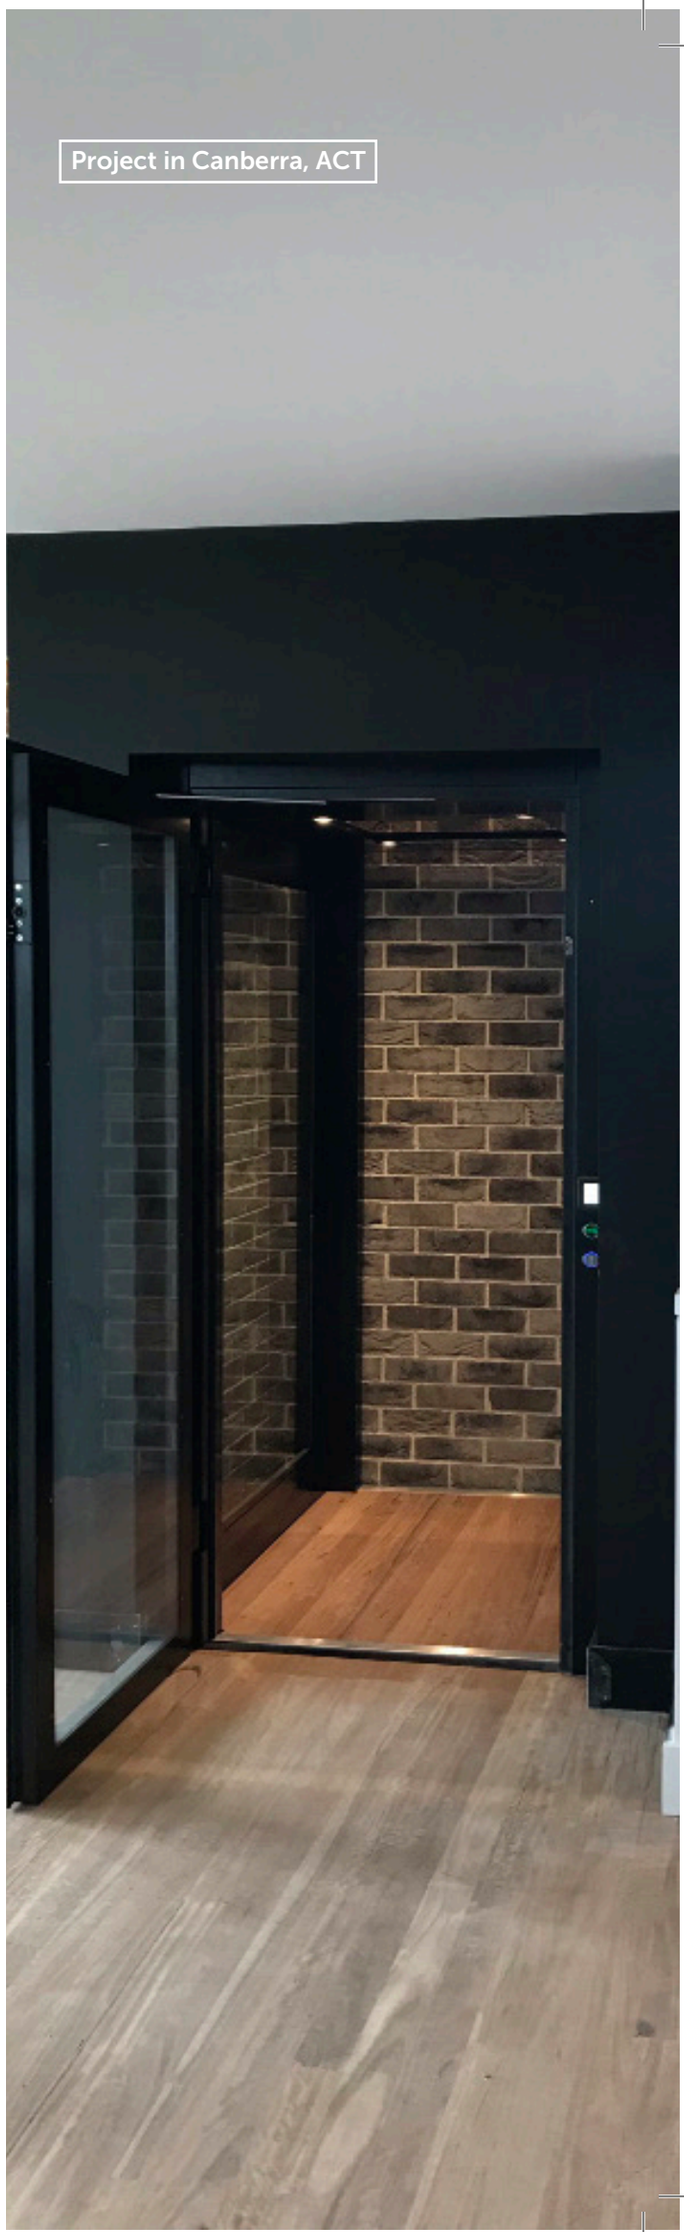

Made from Europe's Finest Materials

Architects and industry professionals highly regard the Linea models for not only residential applications but also commercial.

Being produced from Europe's major brands you can be assured of quality as well as ease of sourcing parts long into the future. If you're looking for a bespoke solution that takes your project to new heights, look no further.

We have installed hundreds of lifts in different organisations such as offices, schools, childcare, retail, restaurants, churches and more building types throughout Australia.

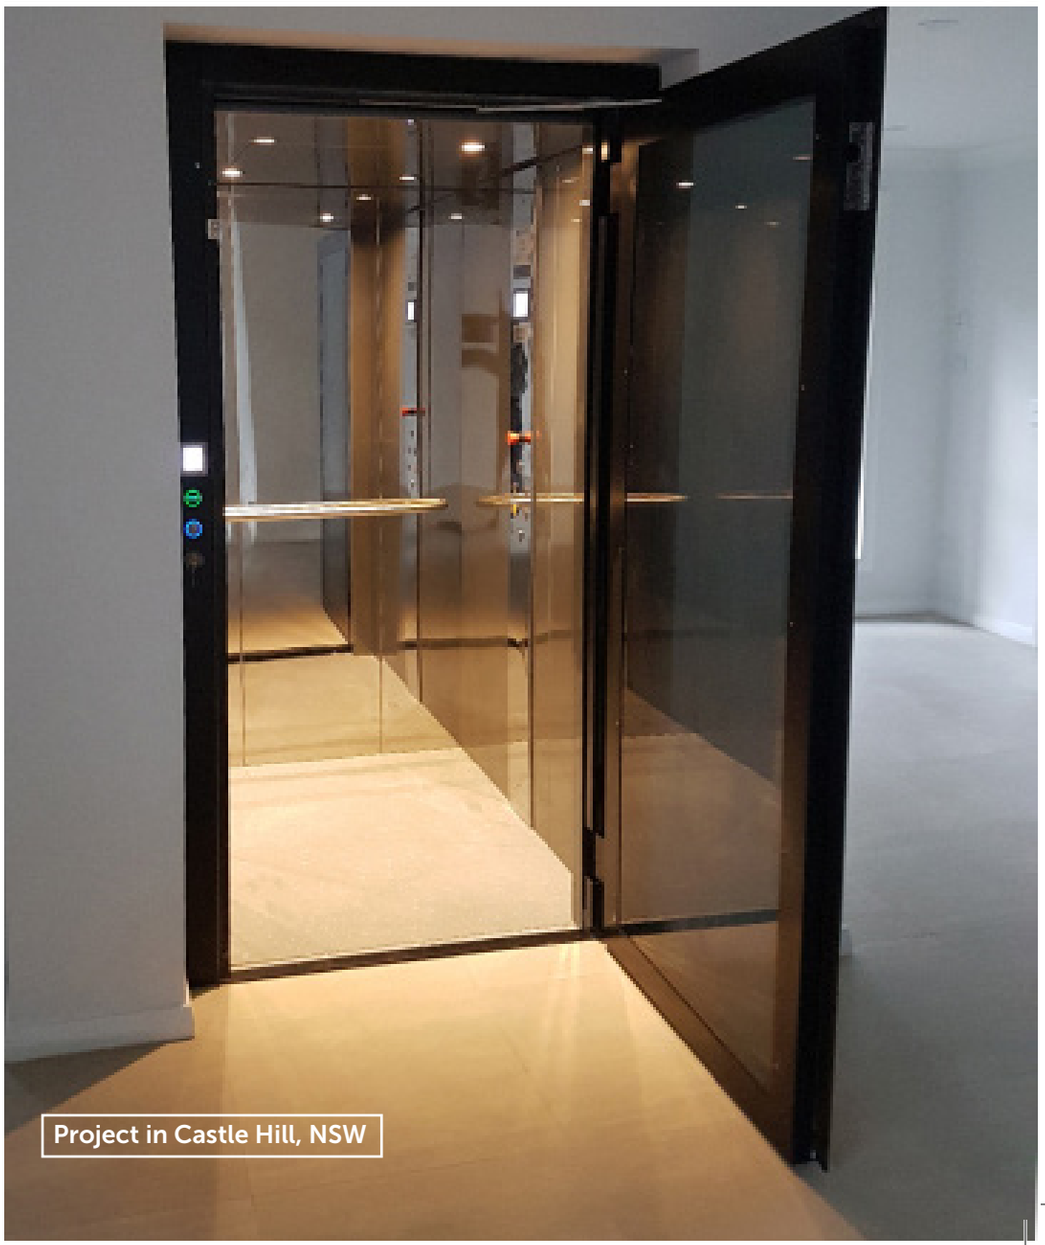

See page 38-43 for actual installs Australia-wide.

CONTACT US FOR SIZES RELATING TO STEEL SHAFT

STUD FRAMED SHAFT

WITH INTERNAL PLY LINING

- ☑ 2x Steel support by customer or builder
- ☑ Indoor or Outdoor
- ☑ Cost-Effective
- ☑ Reduced installation time
- ☑ Easily sheeted in your choice of material

They are used in residential construction as the most cost-efficient lift shaft method. Direct Lifts will supply detailed drawings with loads for the projects engineer to integrate into the buildings plans. With a commercial project, confirm fire rating/materials required with certifier/ fire engineer.

Minimum Pit:
Swing Door - 100mm
Sliding Door Hydraulic - 130mm
Sliding Door Gearless - 200mm

MASONRY SHAFT

- ☑ Provided by customer or builder
- ☑ Indoor or Outdoor
- ☑ Fire Rated
- ☑ Low Maintenance

Traditional lift shaft design is structurally robust for heavier loads and fire rated.

For more significant effect, the lift car can have glass walls in combination with murals/graphics within the shaft walls.

Minimum Pit:
Swing Door - 100mm
Sliding Door Hydraulic - 130mm
Sliding Door Gearless - 200mm

HYDRAULIC

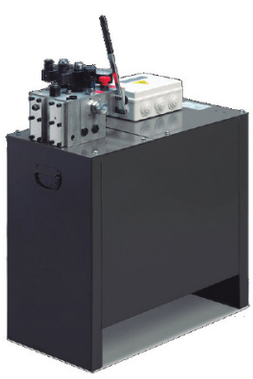

Value and **robustness** via proven fluid driven technology

- Budget friendly and economical to install
- Serves low to medium traffic
- Straightforward design thats low maintenance.
- Twin valve dual speed offers smooth starting & stopping of the lift
